Dhaka, Bangladesh

An aspiring Frontend Developer with a strong commitment to building dynamic and responsive web applications. My journey in web development is fueled by a passion for technology and a dedication to continuous learning.

Work Experience

Frontend Developer

Jan 2025 - May 2025

[Coderammer IT Solution](#) | Dhaka, Bangladesh

I primarily focus on building optimized and responsive front-end interfaces, while also contributing to back-end development. This role allows me to work across the full stack and continuously sharpen my skills.

Frontend Developer (Intern)

Jun 2024 - Aug 2024

[Freelancer Team](#) | Remote

- I successfully converted a React project into Next.js for the Azzle - AI Technology Startup Template (<https://shorturl.at/1OSCJ>) during my internship. Additionally, I initiated the development of a marketplace platform, similar to Ticksy (ticksy.com), where users can buy and sell websites.

Projects

Online Book Store

Dec 2024 - Dec 2024

A online book store for buy books.

- User can add books in cart.
- User can checkout with their order.
- Admin can see the order details and approve.

Digital Wallet

Aug 2025 - Aug 2025

A modern, responsive digital wallet application built with React and TypeScript, featuring real-time transactions, analytics, and multi-role support.

- Multi-role Support: User, Agent, Admin dashboards.
- Wallet Management: Balance tracking, transactions.
- Real-time Analytics: Charts and transaction insights.
- Secure Authentication: Role-based access control.
- Responsive Design: Mobile-first approach.

Ai Image Enhancer

Jan 2025 - Jun 2025

Ai Image Enhancer is a web app that uses the Picwish AI API to enhance images. The app allows users to upload an image for enhancement, and download the enhanced image.

- Image Enhancement: Users can upload an image and get a enhanced version of it.
- Download: Users can download the enhanced image.
- Uses Picwish AI API to enhance the image.

AI Studio

May 2025 - Jun 2025

AI Studio is a prompt-based image generator web app built with React. It leverages the Pollinations AI API to generate images from text prompts using different AI models.

- Generate AI images from any text prompt.
- Choose from different AI models for creative variety.
- Download selected generated images and save them to a "Downloaded" page with persistence.
